BGA Simulator

Starting Up/ Closing Down

The following procedures should be followed to start up the simulator:

1. Plug into mains
2. Insert key
3. Turn Power knob to ON
4. Turn the key switch clockwise and hold for 30 seconds.
5. It may take up to two minutes for the system to complete its start-up sequence. Please be patient. If the system does not start for any reason, turn the switch anticlockwise and hold for approximately 30 seconds. Wait a further 30 seconds then turn clockwise and hold for 30 seconds.

Both PCs, the three main screens and the instrument displays should then be functional.

When boot up is complete, load Condor by double-clicking on the Condor icon on the left hand side of the main display,

To close down:

1. Exit from Condor
2. Close down the main PC by clicking on the Windows Start button (botton left hand corner of main display) and selecting Shut Down
3. When this process is complete, turn the Power key on side on fuselage to off.
4. Remove key.
